

VW  
2/5/08.  
AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph starting on page 11, at line ~~7~~<sup>3</sup>, as follows:

In another embodiment, a CCH 124 is a stand-alone computer system with the MSCH 118 directing the CCH ~~124~~ to 124 to access a media file from an SCH located on the Ethernet LAN 102. Of course, an MSCH could be located on the Ethernet LAN 102 or 104, the token ring LAN 106, or other position on the distributed streaming media server system of the network diagram 100. As will be understood by those of ordinary skill in the art and viewing the present disclosure, numerous variations exist for the CCH to obtain media files from one of the SCHs.
